

DYLAN GORRAH

Software Developer | QA & Test Automation

Bloemfontein | 067 702 0221 | dylangorrah3@gmail.com | github.com/Dylan-Gorrah | [LinkedIn](#) [Portfolio-Site](#)

PROFILE

Software developer moving into QA. I write and run test cases against acceptance criteria, do manual and exploratory testing, and log and verify defects. For checks that need repeating, I've used **Postman Playwright and Cypress**, and my latest project runs 27 unit tests in a CI pipeline on every push. On the development side I work mainly in **C#, ASP.NET Core, React, TypeScript and Next.js**, and I've built websites for paying clients. I also **tutor Java at IIE Rosebank College**, where I helped take a high-risk programming module from a **65% pass rate to 85%**, moving it off the at-risk list. I'm completing my Diploma in Software Development in November 2026.

TESTING SKILLS

Testing: Manual and exploratory testing, test case design (Given/When/Then), acceptance criteria, positive and negative testing, regression testing, defect logging and verification

Automation and tools: xUnit, Postman, Playwright, Cypress, browser DevTools

CI/CD: Azure Pipelines (YAML), Azure Repos, Azure Artifacts, GitHub

DEVELOPMENT SKILLS

Languages: C#, TypeScript, JavaScript, Java, Kotlin, PHP, Python

Frameworks: ASP.NET Core, .NET, React, Next.js, Tailwind CSS

Cloud and data: Azure App Service, Azure Functions, PostgreSQL, Supabase, SQLite, MySQL,

Workflow: Git, pull requests and code review, Visual Studio, VS Code, Claude Code, Cursor

TESTING PROJECTS

Thuso (Donation Platform)

Sept 2026 | [GitHub](#)

API testing and a CI pipeline. Group project of three, where I built the prototype and all the testing and DevOps work.

C#, ASP.NET Core, Azure Functions, Azure DevOps, xUnit, Postman, YAML

- Wrote 27 xUnit unit tests for a shared C# library, covering eligibility rules, certificate numbering, donation totals and input validation.
- Built a Postman suite of 8 positive and negative API tests with 20 automated assertions and ran it against both local and live Azure environments.
- Set up a YAML pipeline in Azure Pipelines that builds the solution and runs every test on each push, on a self-hosted build agent I installed.
- When a build failed, I traced it to an unquoted file path, fixed it, and confirmed the fix with a clean rebuild.
- Added field-level validation to an Azure Function API: 400 for invalid input, 422 for donations that break business rules.
- Worked with feature branches and pull requests, resolved a merge conflict, and published the library as a versioned NuGet package.

Sok (E-Commerce Store)

2026 | [GitHub](#)

Test plan and defect log for my own e-commerce prototype.

Next.js, TypeScript, Supabase, Drizzle ORM, PayFast

- Wrote 53 test scenarios in Given/When/Then format across 8 areas of the shop, from login and checkout to order tracking and the admin panel.
- Logged 8 defects with root causes. One was a data-loss bug where saving a blank account form wiped the customer's saved delivery address.
- Tracked a vague "failed to save" error back to a stale session after a database rebuild. Fixed it with an account check and a proper sign-out, then wrote test scenarios to cover it.
- Caught an animation that played twice on every page change during exploratory testing.
- Built server-side payment checks through PayFast ITN webhooks, so an order is only marked paid once PayFast confirms it.

EXPERIENCE

Freelance Web Developer buisness

2025 - present

Now registered as QuietBedrock (2026)

- **moff.site**: Built the client's website and kept working on it on a paid, ongoing basis, adding changes and new features every few weeks.
- **Fen & Fern** (fenferncreations.com): E-commerce site in React and TypeScript with WhatsApp ordering, Also added Google Maps delivery calculations and SA address autocomplete.
- **EJ Tours & Projects** (ejtoursandprojects.co.za): Booking site for a Cape Town tour operator, with WhatsApp bookings, structured data for local search and fixes for iOS display issues.

Software Development Tutor, IIE Rosebank College (2years)

2025 - present

- Teach Java and object-oriented programming to first-years through hands-on labs and live debugging.
- Helped lift a high-risk module from a **65% pass rate to 85%**, which took it off the at-risk list.
- Created the class's learning materials, including tutorials, practice exercises, and self marking quizzes.
- Won the **Best Tutor/Teacher Award in 2 years in a row 2025-2026**

OTHER PROJECTS

Contract Monthly Claims System

2025 | GitHub

C# and ASP.NET Core 8 MVC app that moves monthly claims from tutor to coordinator to manager to HR, with role-based access, automated rule checks and exportable reports.

Snokonoko (Android Finance Tracker)

Group project | 2025 | GitHub

Native Android app in Kotlin, built on MVVM and Room, with separate data for each user and a reactive UI.

Indigenous-Language Weather Warning Assistant

2026

Python and Flask desktop app that watches live weather for small-scale farmers and answers their questions in Afrikaans, Sesotho or Xhosa through an LLM API.

EDUCATION

Diploma in IT: Software Development, IIE Rosebank College

Completing Nov 2026

Top of class. Final-year modules include **Software Quality and Testing**, and Applied Programming.

Higher Certificate in IT: Support Services, IIE Rosebank College

2023

LANGUAGES

English and Afrikaans, both native. Comfortable working, writing and presenting in either.
